

Wave Of The Present

High volume, low pressure painting systems are practically the standard for the industry already. AccuSpray a leader in the field is offering their "System 23K" for the hobbyists who are ready to start doing their own painting. The package utilizes lightweight composite materials making it very portable and easy to use. For more info contact The Eastwood Company, Box 296, Malvern, PA 19355, or call 610-640-1450.

Pulling For Power With Underdrive Pulleys

Underdrive pulleys have become a standard upgrade for many Mustangs lately. The manufacturers claim that by eliminating the unnecessary drag that stock pulleys create, extra horsepower is freed up and our 'Stangs will actually be quicker as a result.

I had the opportunity to test a set recently from one of the main suppliers.

The ones used were called "street pulleys". Generally, this type is considered appropriate for street duty because they don't under-mind the engine's charging or cooling systems. Once installed (allow an hour), I noticed my engine revved quicker right off idle. I also found a 2/10ths reduction in my

zero to sixty times. On the down side, if you drive in the bumper-to-bumper traffic I do, expect your car to over-heat in the summer, even if your engine is fresh, or new.

If you *never* encounter this kind of traffic, underdrive pulleys are ideal. But, if heavy traffic is the norm, there are better ways to free up horsepower.
