

Restoration parts engineered to fit YOUR classic Mustang

Made in USA

Quality Assured Restoration Parts You Can Depend On

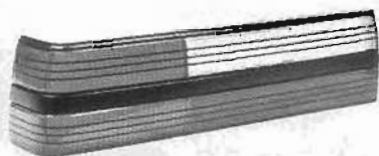

1969-1970 Mustang door sill plates stamped from the original Ford tooling at Carpenter's facility. Made precisely the same as the ones that came down the assembly line.

What's The Original Tooling Advantage?

The advantage of using restoration parts made from the original Ford tooling is that they will look and fit exactly like Ford Motor Company intended them to. Take our 1969-1970 Mustang door sill scuff plates for instance. Ford used .300 gauge aluminum to make their scuff plates. We use .300 gauge aluminum to make our scuff plates. Ford engineered their scuff plate so that one design fit both left and right sides perfectly. Since we're using the exact same tooling, our scuff plates fit both sides perfectly. Last but not least when you see our scuff plates installed in your classic Mustang they look like they belong there, bright finish, crisp details and all.

Daniel Carpenter Mustang Reproductions has been manufacturing weather stripping, rubber, molded plastic and stamped metal Mustang parts since 1983 and has developed an extensive variety of quality restoration products for 1965 through 1993 Ford Mustangs. Our products are confidently used by professional auto restorers and Mustang enthusiasts alike and can be found throughout the network of classic Mustang parts suppliers world wide.

For quality assured Mustang parts look for the Original Ford Tooling and Daniel Carpenter labels.

1983-1986 Mustang Taillight Lens

1967-1970 Mustang Radiator Shroud

1965-1969 Mustang Taillight Lenses
