ClassicLEDs

Making the Past Brighter

Our expanded line of LEDs brings individually designed systems along with custom designed LED systems.

Our 1971/73 and NEW 1983 THRU 1993 Mustang, combines the reverse light to both red and white allowing the installation of sequential lights.

Our new 1983/93 contains 464 Super Bright 5mm LEDs

ClassicLEDs's new 1983 thru 93 LEDs fill the entire upper portion with red LEDs. The reverse lens combines red and white LEDs. The OEM turn lens shows red. The sequence fills the upper lens area. With the brake in use the upper sections and lower large brake fill with red LEDs. The lower section of the large lens remains in the brake operation during sequence.

Our new Shelby/Eleanor/Calif Special and Cougar LED system replaces the OEM sequencer with new *Digital Sequential Software*. Each LED board contains 208 Red Super Bright LEDs.

All ClassicLEDs LLC products are manufactured in Oregon and come with a limited lifetime warranty.
