Aluminum Radiators

Beat the heat with this high quality aluminum radiator! Features extra large one inch tubes for 4 row efficiency but with 5-7 lbs. less weight. We also added a baffle at the top to help evenly distribute the flow of hot water across the upper part of the radiator. The original radiators had a real problem distributing the hot water to the far left side of the radiator. We have tested our design and recorded significant changes in the temperatures across the radiator's cooling tubes. This radiator will bolt in just like the original.
