QA1® UPDATED STRUTS

QA1® introduces its updated Mustang struts, now available in either single adjustable, double adjustable, or drag race "R" series. These adjustable configurations fit 1979 to present Mustangs.

Additionally, QA1® also offers a complete selection of double, single and drag race "R" series front and/or rear shocks for 1964 to present Mustangs.

The double adjustable struts provide 18 positions of compression adjustment and 18 positions of rebound adjustment, for a total of 324 possible valving combinations. Single adjustable struts provide 18 positions of simultaneous rebound and compression adjustment. Drag race "R" series struts are designed specifically for drag racing and feature a fixed firm compression with 18 positions of rebound adjustment to control how quickly the weight is transferred to the rear of the car. With simple on-the-car adjustment, all it takes is a turn of the knob(s) for quick and precise valving changes to go from street to strip to road racing.

The struts feature easy bolt-in installation, and the aluminum threaded bodies allow for coil-over conversion and ride-height adjustment. Made in the USA, QA1's struts are individually dyno tested and serialized. They are also revalveable and rebuildable by QA1® Authorized Service Centers.
