

Glazier's Mustang Barn

INC.

Tales in the Mustang Barn

Our restoration shop has been bringing back to life Mustangs, Fords, Thunderbirds, and other cars ever since 1975. Each car has posed its own special set of challenges.

Take this example: A customer drove his 1968 Mustang GT coupe to our Mustang Barn not long ago. It was a great looking car by anybody's standards—finished in Tahoe metallic green and sporting just about every option that Ford sold in 1968. Our friend had driven the car over 200,000 miles—but it looked showroom new.

He had just one problem—he wanted a 1968 GT convertible. We said we'd find him one. And we did. He liked it but after driving it a few months, he was back. Not only did he still want a convertible—but he wanted us to turn his coupe into a convertible.

Now, we've restored dozens of convertibles. But we've never created one. It was a challenge. We took the coupe down to the bare metal. We cut the greenhouse off the car and began the very precise job of installing hundreds of parts from our large inventory that make a convertible what it is.

The total project took four months—and 200 manhours of work, but when it was done, our friend had what he wanted—his own original coupe, now reborn as a totally correct GT convertible with completely correct and functioning soft top. We retained the original vehicle identification plate, of course, so there would be no confusion about the car's history. That plate has startled more than a few show judges!

Yes, our customer was well satisfied—and has asked us to do another custom project for him. Maybe we'll get around to telling about that in a future column. In the meantime, we invite you to order a copy of our new 1983 catalog—filled with several thousand parts including the ones that perhaps you are looking for. We'll take very good care of your order.
